

CMIS 3124 – Web Design Project

Redesign and Enhancement of an Existing Sri Lankan Website

This is a group project and the maximum number of members per group is six.

In this task, you are required to thoroughly examine a specific Sri Lankan website within a designated field or industry assigned to your group and identify its weaknesses. You should suggest modifications to fix the identified problems and redesign the website to enhance the user experience and functionality.

Project Milestones

(Week 1-2): Project Planning and Website Evaluation

- Select a Sri Lankan website for the assigned field/ industry.
- Analyze the website to identify drawbacks and areas for improvement.
- Submit a project proposal by the end of Week 2. The project proposal should include a description of the organization to which the website belongs, an overview of the website evaluation, proposed modifications, methodology, and timeline.

(Week 3-4): Redesign Planning and Prototyping

- Create wireframes and prototypes for the redesigned website.
- Finalize innovative features and redesign strategies.
- Submit wireframes and the redesign plan document by the end of Week 4.

(Week 5-9): Development and Implementation

- Develop front-end and back-end components.
- Integrate innovative features and perform unit testing.
- Submit a functional website prototype by the end of Week 9.

(Week 10-12): Testing, Deployment, and Documentation

- Conduct thorough testing and fix any bugs.
- Deploy the final website and prepare the project report.
- Submit the deployed website and project documentation by the end of Week 12.
